SUMMARY OF QUALIFICATIONS

Front-End Developer with a strong focus on React, experienced in building modern, responsive, and user-centered web applications. Proven experience in personal and freelance projects involving authentication, complex forms, API consumption, global state management, and complete user flows. Solid Full-Stack background with Node.js, Express, and both relational and non-relational databases. Practical, fast learner, with strong attention to detail and user behavior.

PROFESSIONAL EXPERIENCE

Front-End Developer – Convector (Collaborative Project)

2025

- **Development of the application front-end using React, focusing on user experience, reusable components, and complete navigation flows.**
- **Close collaboration with a back-end developer, working in an environment similar to a professional development team.**
- **Task organization using Notion, following a SCRUM/Kanban workflow (Not Started → In Progress → Done).**
- **Participation in weekly meetings for technical and product alignment.**
- **Use of Git for version control, including branch management and changelog practices.**
- **Local environment setup with back-end integration for testing and front/back communication.**
- **Participation in production deployments, even though the product has not been officially launched yet.**
- **Hands-on experience with the full development lifecycle: planning, implementation, testing, and deployment.**

Front-End / Full-Stack Developer – EI Tutor

- **Development of a web application focused on language learning.**
- **Front-end development using React with emphasis on UX and reusable components.**
- **Integration with Firebase for authentication and data persistence.**
- **Implementation of user flows, validations, and application state management.**

REACT PROJECTS

- **Typing game with scoring system**
- **Advanced forms with validations**
- **Expense tracking application**
- **Movie catalog consuming external APIs**
- **Strong focus on hooks, state management, and reusable components**
